Robert Jess, UK & Europe Sales adds, "It's been a pleasure working with Preston Board & Packaging; they have a great portfolio of packaging and over the last couple of years we have seen them grow and diversify largely due to our machines unique capabilities. To receive such positive feedback from customers is testament to the manufacturing excellence of Baysek. Our machinery is made in the USA. Additionally, we have a UK facility from which we service our UK & European customers.

In August this year, Preston Board & Packaging look back on two years of successful co-operation with Baysek Machines. The company purchased a C-170 automatic die cutter from the US-based Baysek. In addition, they added a solid board attachment on the machine in order to process thinner substrates.

Christopher Ingham, Managing Director, says, "We are happy that we decided to invest in a die cutting machine from Baysek. It has been a great investment for us. The machine has significantly increased our output of specialist packaging. In the last two years we have been able to carry out many new projects and explore new markets, as well as increase the volume of our current customer base. The after-sales service and support from Baysek is second-to-none."
